

Hello Tom. Standard Register does not believe the testimony of Ed Grillot is credible or establishes a sufficient nexus to disposal of hazardous material at the South Dayton Dump site to warrant it being notified of potential liability by USEPA. I have articulated below why we believe that and would ask that USEPA retract the Notice Letter dated September 10, 2012 to Standard Register unless there is other credible evidence linking the disposal of hazardous substances by Standard Register to this site. Thank you.

Tim.
